ASSET MANAGEMENT

SRIT

DIGIT
by eGov Foundation

Urban Local Bodies (ULBs) are like corporate organisations in that they have many tangible assets that need to be maintained and accounted for. Asset management is a key step for a ULB to build its balance sheet, and is a critical activity.

The Asset Management application of the DIGIT platform offers a full suite of services for visibility, tracking and control.

Tracking Assets
Creation and track assets throughout their lifecycle

Automated Valuations
Calculate depreciation, asset revaluation, and disposal

Asset Lifecycle - Every stage from creation to disposal is maintained. Capitalisation, improvements, revaluation, and disposals are all tracked.

IMPROVED VISIBILITY TO ASSET INVENTORY

through our

600+ cities are being transformed platform

"Our cities will be truly smart if they can deliver high quality urban amenities, have an accessible and responsible government, and an engaged citizenry. Electronic governance is a major scoring point."

Shri K. Kanna Babu
Director of Municipal Administration
Government of Andhra Pradesh

DIGIT ASSET MANAGER BENEFITS

Streamlines Processes
Built-in workflow tools for various asset-related transactions such as registration revaluation, and capitalisation assist in improving staff productivity.

Valuable Productivity Tool
Automated depreciation process based on pre-defined rules. Integration with the Works module helps pull in asset improvements.

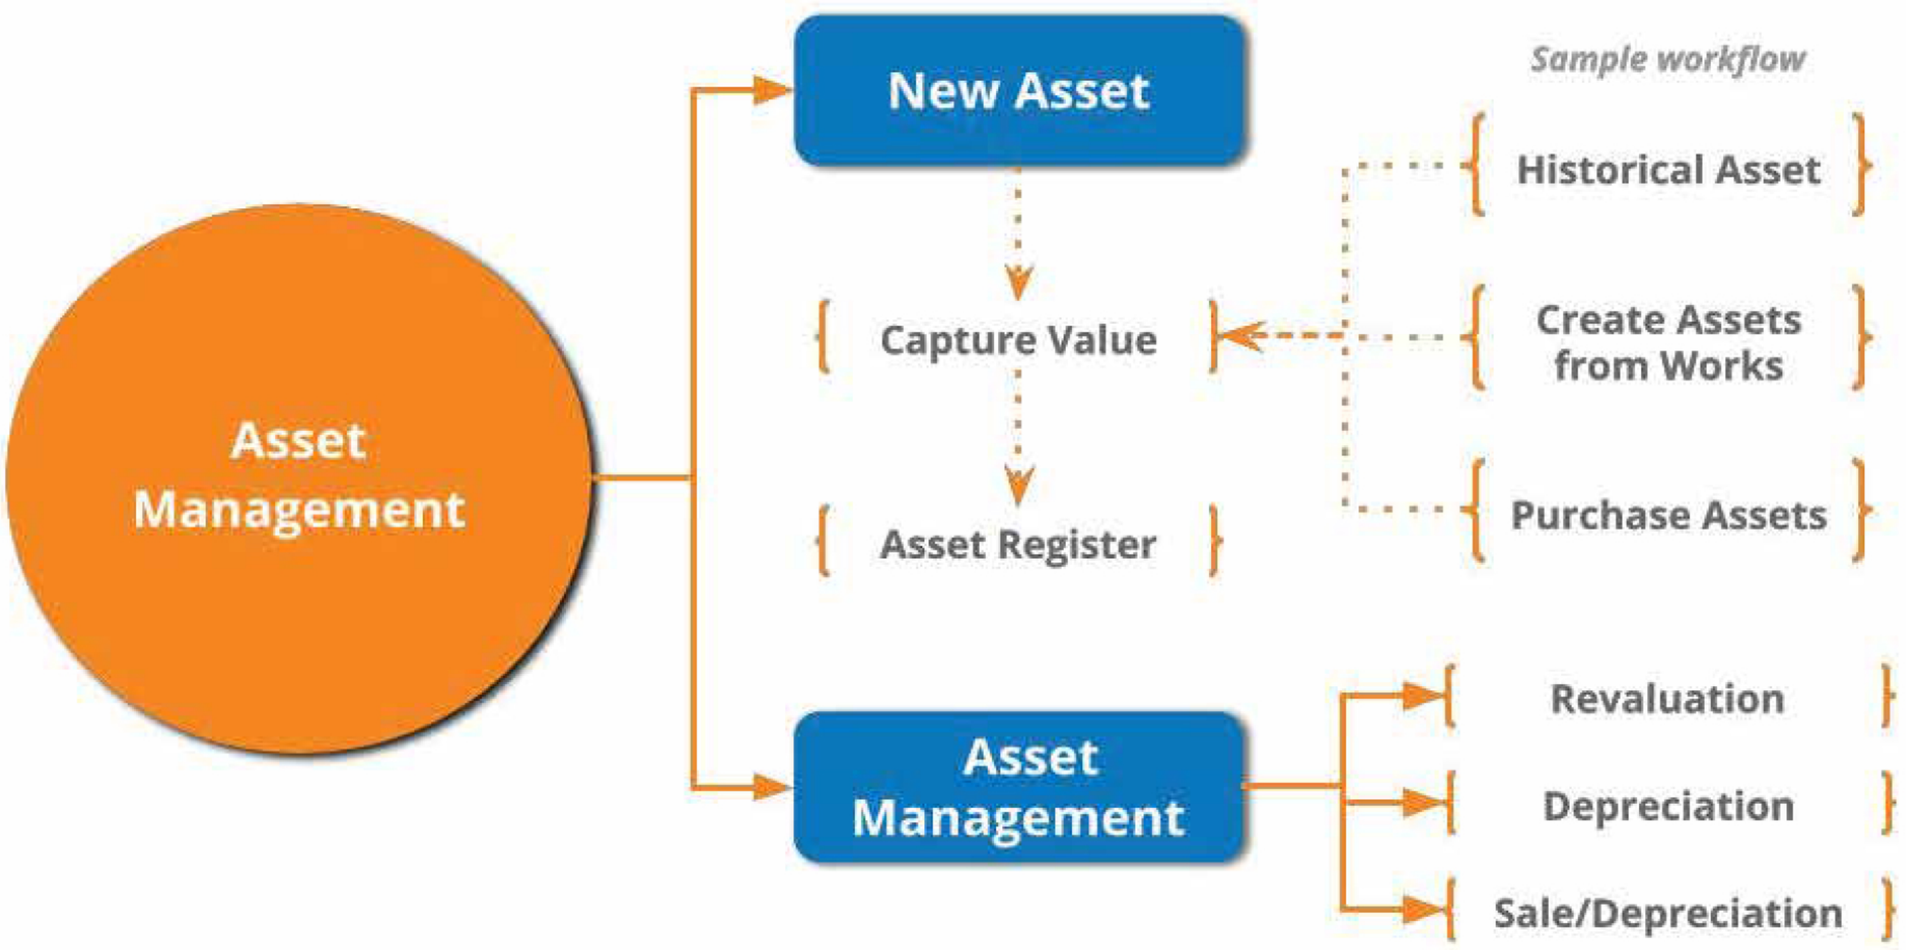
Better Control over Data Quality
Capturing asset master data helps in better categorization of assets. Huge volume across ULBs handled efficiently.

Improved Cross-Department Coordination
Management of the government's entire asset base in a single system and automation of many standard transactions through an assets lifecycle reduces costs. Fixed-asset transactions are more accurate.

Urban Development Challenges in a country as big as India often grow faster than our ability to solve each challenge individually. In the digital era, technology holds the key to solving problems rapidly at scale and in a sustainable manner.

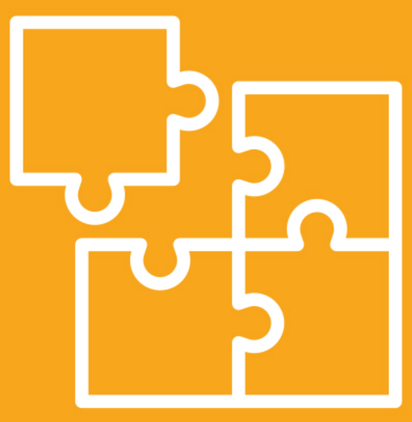
KEY FEATURES

- **Master Database**: Register and classify all movable and immovable assets in one place
  Location | Status | Value | Jurisdiction Details | Physical Attributes
- **Asset Data Management**
  Development | Purchase | Capitalisation | Revaluation
  Disposal | Sale | Depreciation | Consumption
- **Standardised Workflows**: Automation of standard asset lifecycle transactions
- **Asset Maintenance**



REPORTS

- Asset Register Report
- Asset Depreciation Report
- Asset History Report
- Asset Maintenance Report



INTEGRATIONS

- With the Works module to automate the end-to-end process starting from the conceptualization of a project
